I won a place on the team building ASOS.com out of over a thousand applicants.
I worked with some of the brightest minds in the industry and learned valuable soft and hard skills. I have worked full-stack with an emphasis on Azure and .NET but moved to React, Typescript, and Node. I now specialize in SvelteKit and love using it with SurrealDB, Bun, Vercel, Lambda and other modern tech.
I would be best suited to a medium sized tech focused company with a clear sense or purpose.
I resigned from ASOS to study in an unrelated field at university for pleasure and then after the first year left to travel. Having such a great career start allowed me to take a break and now I eagerly await tackling a technical project with a new team.

WORK EXPERIENCE

ASOS.com (Oct 2018 - Jun 2021)
Software Engineer
Worked in an Agile frontend team to deliver a large greenfield internal React app to a high level of quality. Worked on all aspects from the first day till deployment as the team grew.
