## SUMMARY

Creative Smart contract Developer with a scientific background and a flair for design and strategy, looking to break into the Web3 development field to enhance my skills and build a versatile portfolio.

## EDUCATION

**University of Abuja, Abuja — B.scPhysics**

## Experience

### R3flex-NFT Marketplace:

The NFT marketplace is a decentralized application that allows users to create and trade non-fungible tokens in a market. This smart contract is built on the ethereum blockchain and provides secure functionalities for minting, listing NFT's for sale, purchasing and reselling of NFTs.

### R3-:

This is a liquidity staking smart contract project designed to incentivize users to provide liquidity to decentralized exchanges or liquidity pools. Its functionalities include staking of tokens in order to get rewards such as additional tokens, rewards distribution, withdrawal as well as governance mechanism.

### Sol- Stablecoin:

This is a cryptocurrency designed to maintain a stable value, pegged to the Dai asset, which can be used to purchase NFTs, trade i place for other cryptocurrencies and also provide a stable medium of exchange for transactions as well as offering a hedge against volatility in the crypto market.

HTML, CSS & JavaScript,  
Typescript, Tailwind, Git

Solidity, Ethers-js, Hardhat,  
Foundry, Slither, Echidna,  
OpenZeppelin, EVM, Defi,  
NFT, Blockchain, Smart  
contract Auditing.

Hard Work, Research &  
Planning..

## CERTIFICATES

### FreeCodeCamp Academy

Certificate for Responsive  
Web Design.

Certificate for JavaScript  
Algorithms & Data Structures.

Certificate for Front End  
Development Libraries.

### Alchemy University

Certificate for Ethereum  
Developer Bootcamp.
